REGENeration of neighbourhoods towards a low-carbon,
inclusive and affordable built environment

ELECTRICITY SUPPLIER

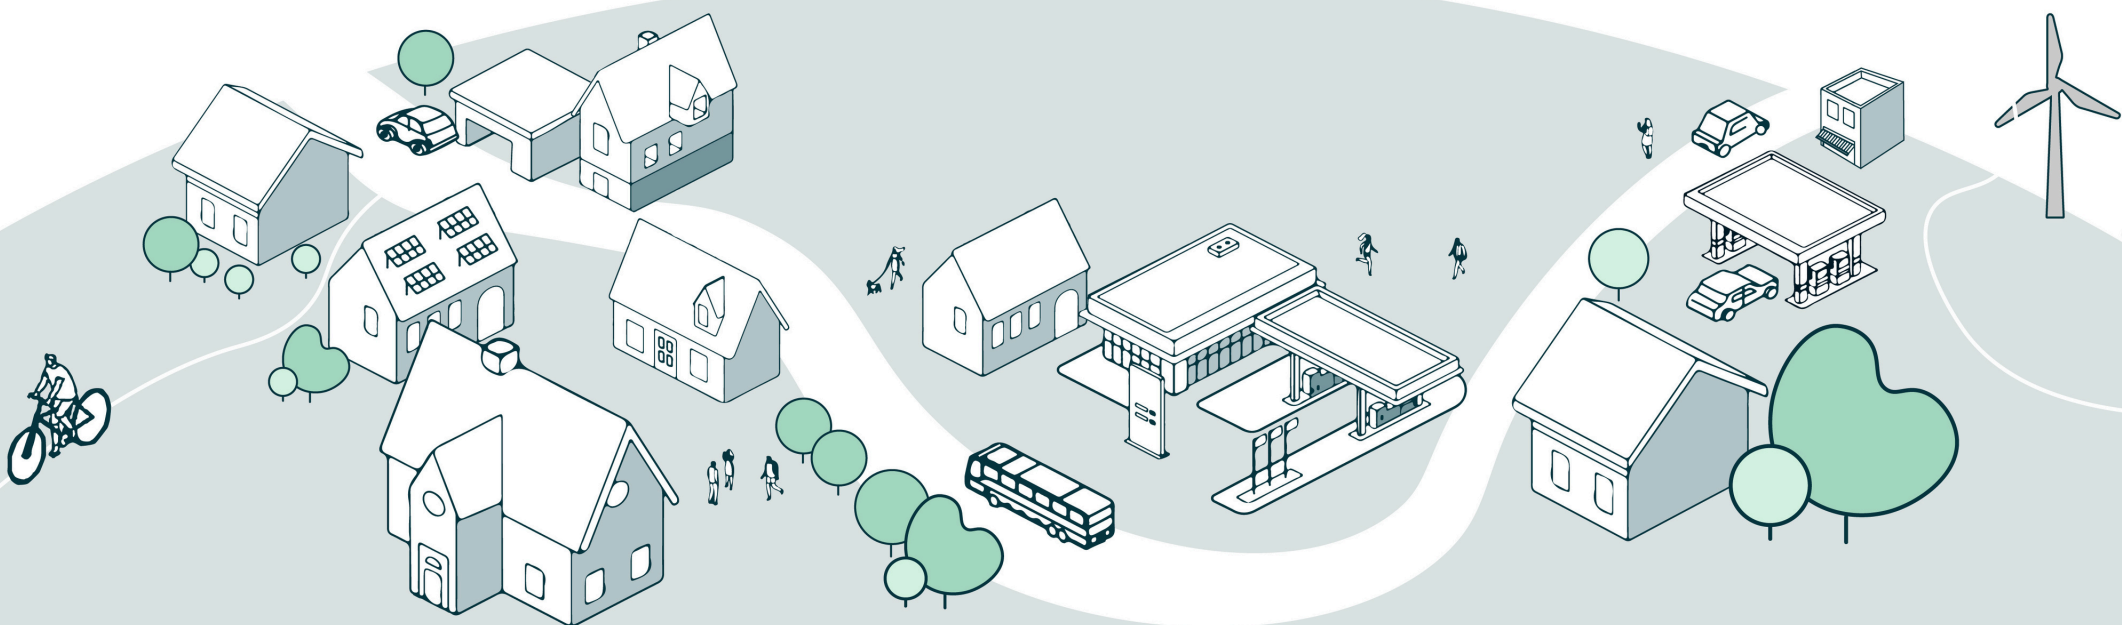

Arden Energy, based in Ireland, offers renewable energy solutions with a focus on solar panels, inverters, and battery storage. They provide tailored solutions for residential, commercial, and agricultural clients, maximizing energy production, return of investment, and sustainability from consultation to maintenance.

How does your organization's expertise contribute to the REGEN project's goals of paving the way toward sustainable and lasting people-centric neighbourhood regeneration through the development of an Assessment Framework for Urban Regeneration (AFUR)?

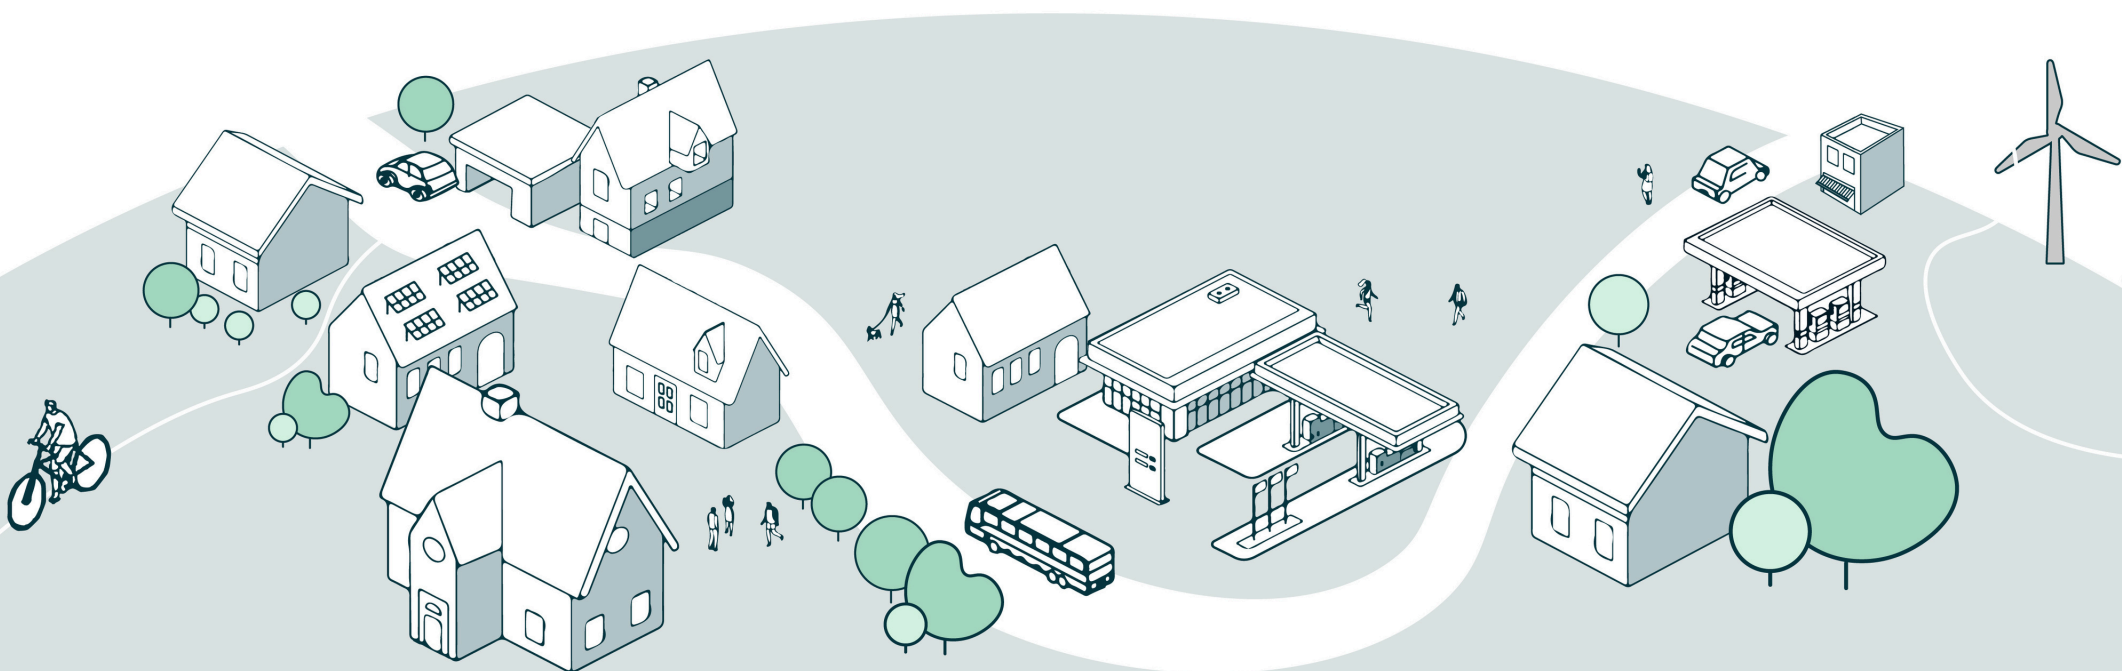

With expertise in electricity markets, we advise on smart billing systems and new flexibility programs to optimize energy management. Our team also specializes in providing energy management solutions and integrating renewable energy systems (RES). Additionally, we have extensive experience supporting energy communities by conducting numerous Energy Master Plans, helping them to develop sustainable and efficient energy strategies.

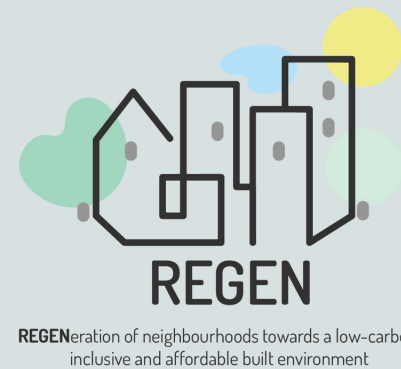

How will your organization contribute to the development/monitoring of the four pilot and ten virtual use cases demonstration projects?

Our organization will contribute to the development and monitoring of the four pilot projects by offering training programs for local stakeholders, including government officials and community leaders, to help them understand and apply the framework. We will also create accessible educational materials, like brochures and videos, to improve understanding in areas with lower education levels.
