

# ARCHITECTURAL FIRM

## Can you introduce your organization?

KAW is a mid-sized architectural firm based in the Netherlands with three offices. Our goal is to contribute to urban, spatial, and social renewal, mainly focusing on social housing. We aim to create attractive designs, conduct thorough research, offer practical advice, and apply sustainable processes and techniques. We also emphasize result-driven project management.

KAW takes a holistic approach to sustainability, considering energy efficiency, material impact, nature inclusion, and social needs.

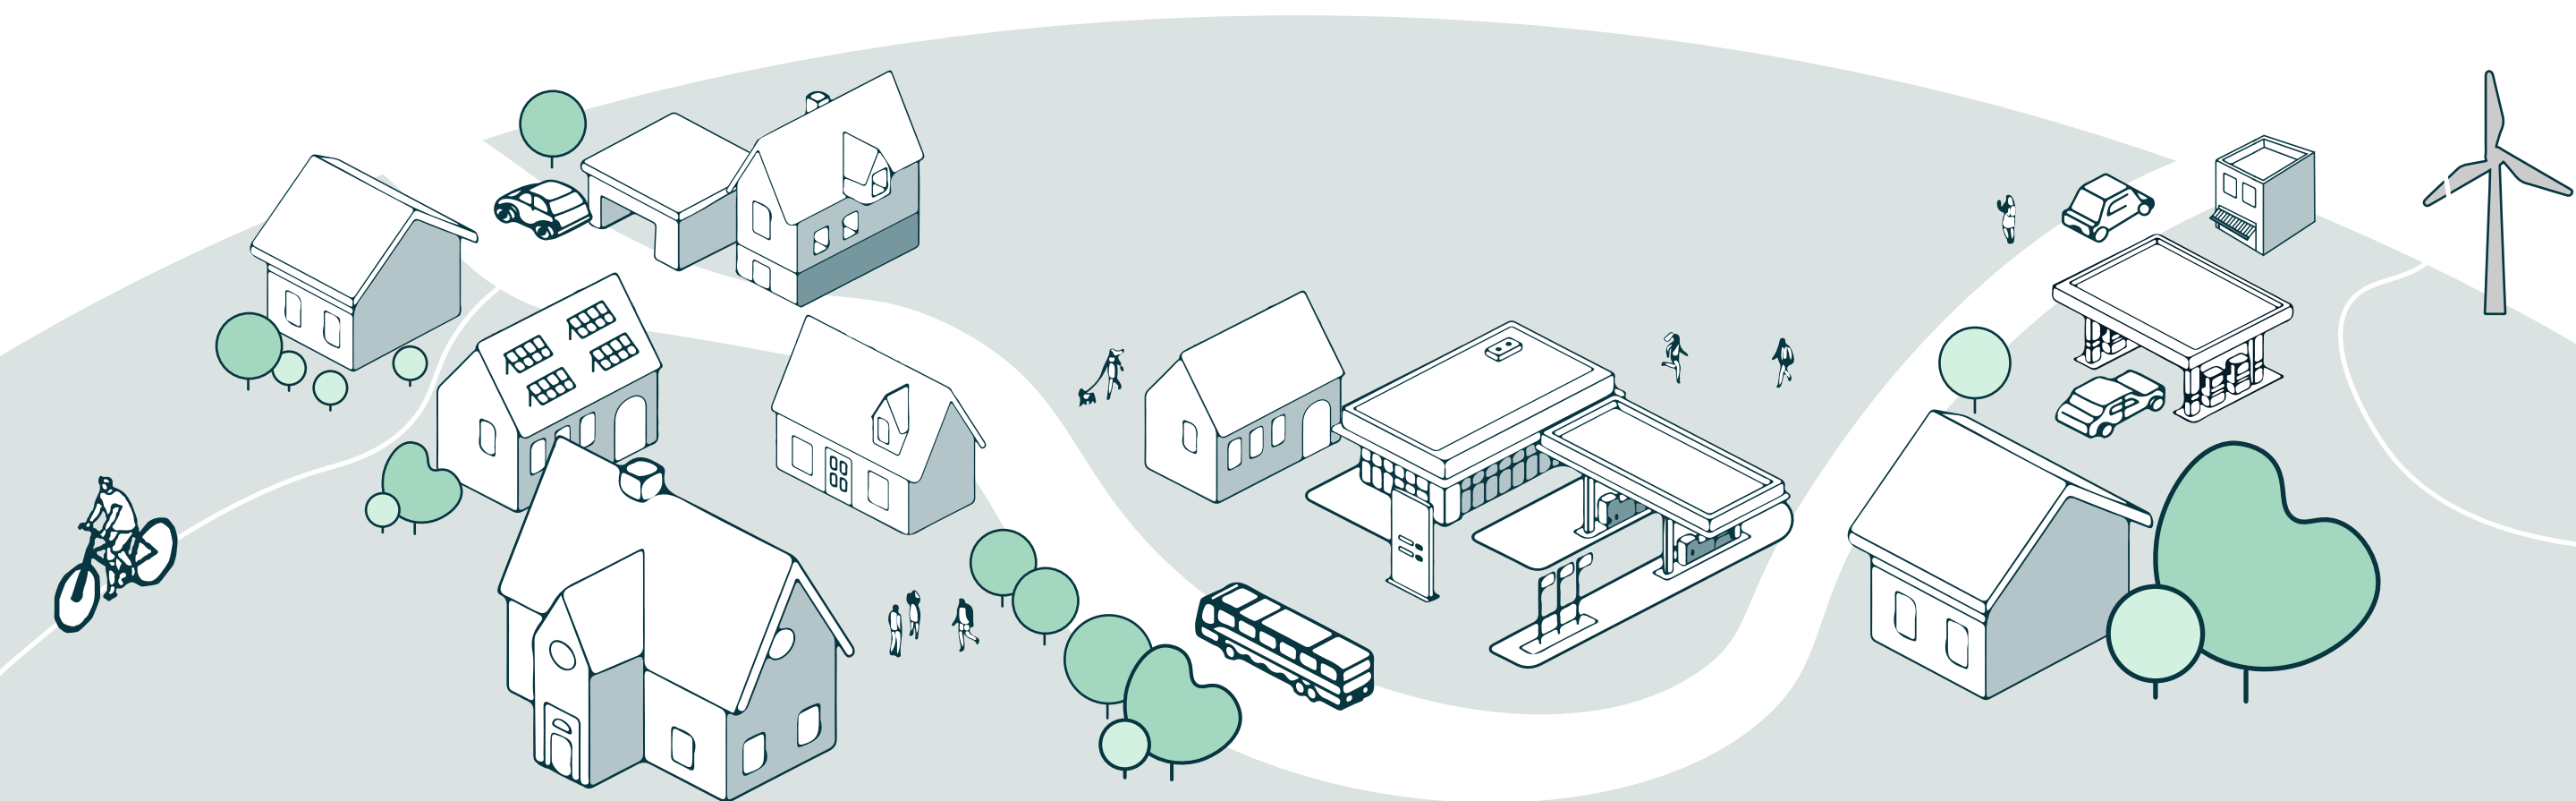

What specific challenges do you anticipate in developing or applying an Assessment Framework for Urban Regeneration (AFUR)?

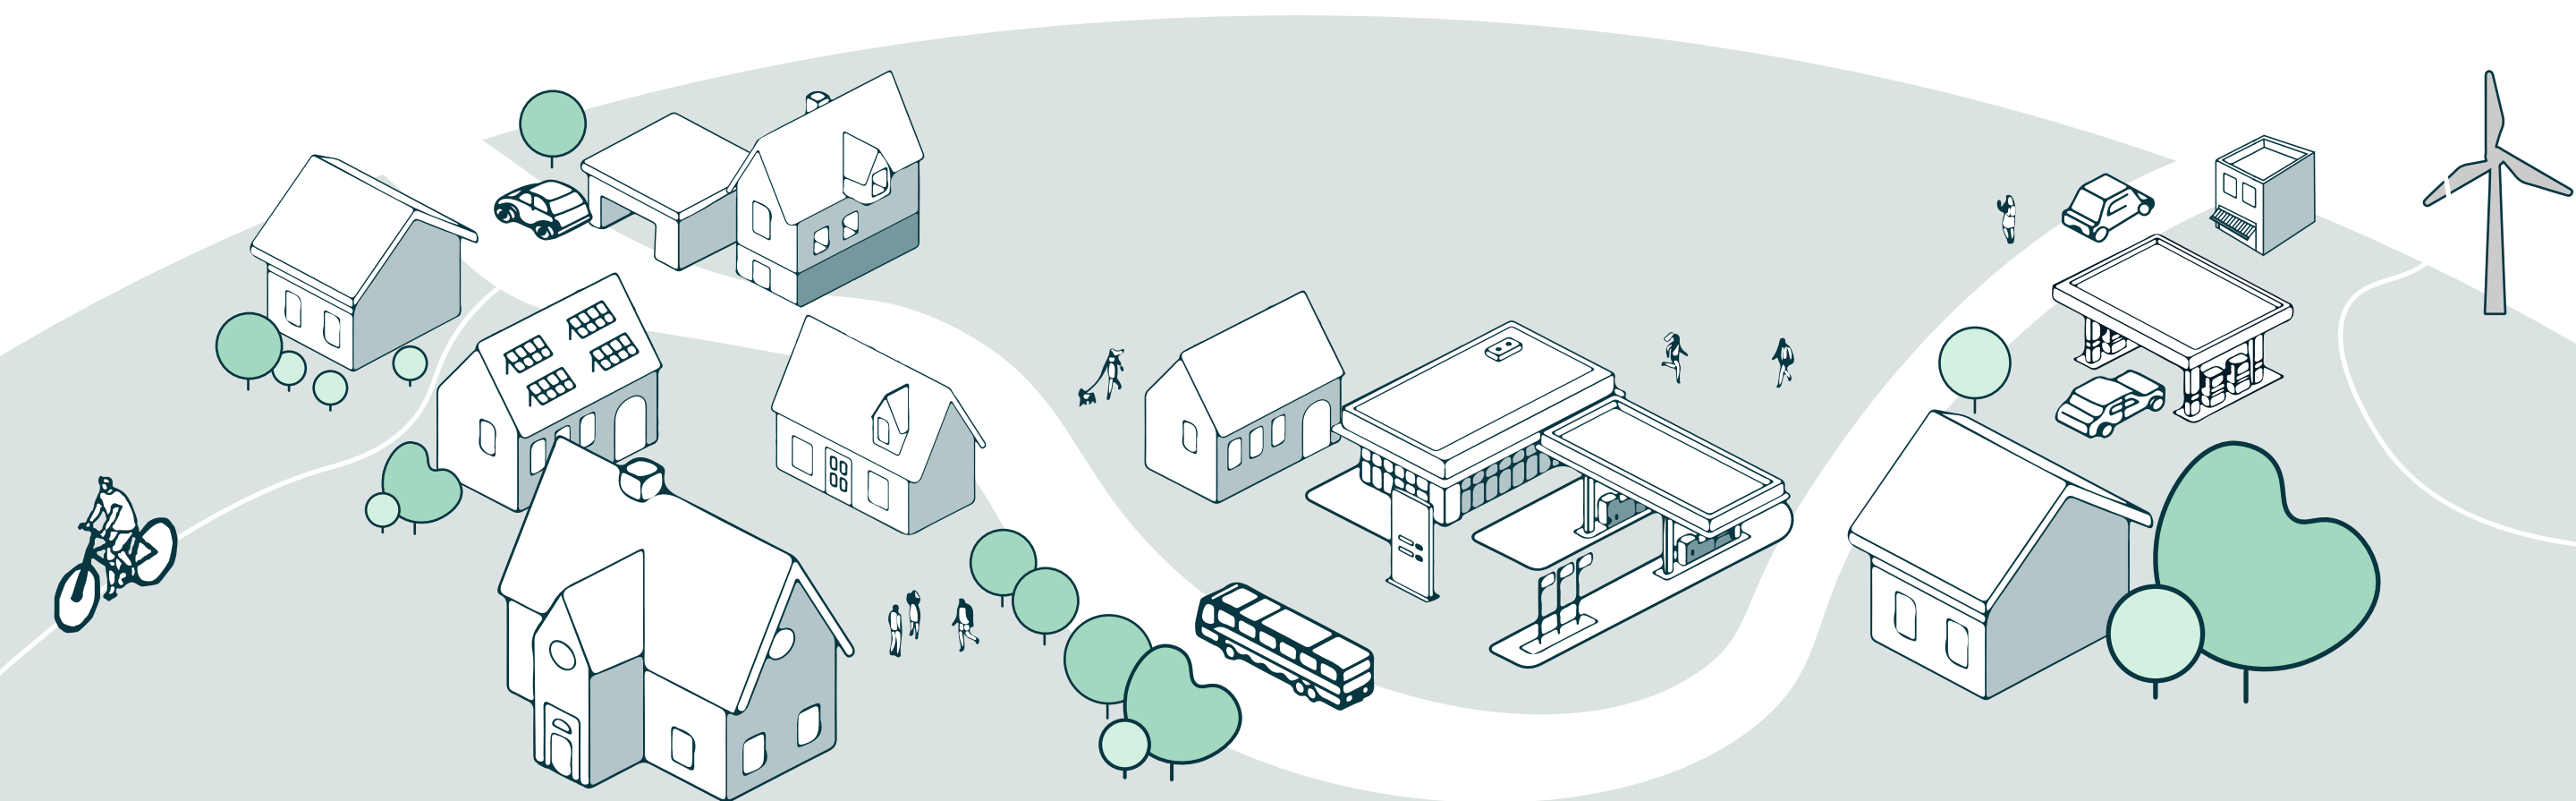

We translate and test the AFUR approach through daily cases and projects. The digital twin serves as the testing environment, linking the AFUR approach to our daily projects. Additionally, we have gained valuable experience working with several neighborhood regeneration offices.

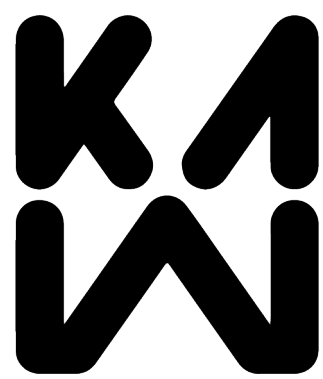

The challenge is to translate the generic AFUR into a context-sensitive, pragmatic, and purposeful version—one that is both flexible and provides strong guidance.

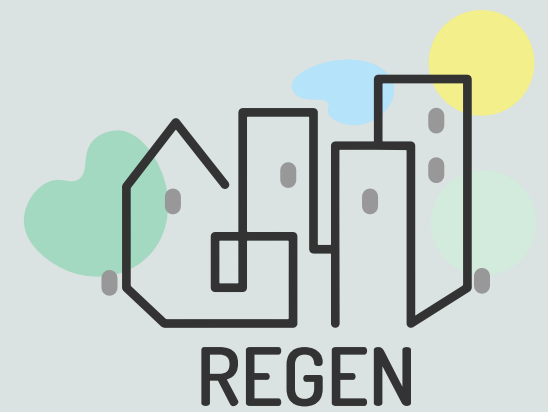

What role will your team play in developing strategies to improve urban planning best practices through neighbourhood regeneration interventions?

In collaboration with Vervoort architects, we will help develop a list of neighborhood regeneration interventions, incorporating those we have already applied in our practice. We will assist in organizing and categorizing these interventions and can contribute to visualizing and presenting them effectively.
