

VERVOORT ARCHITECTEN

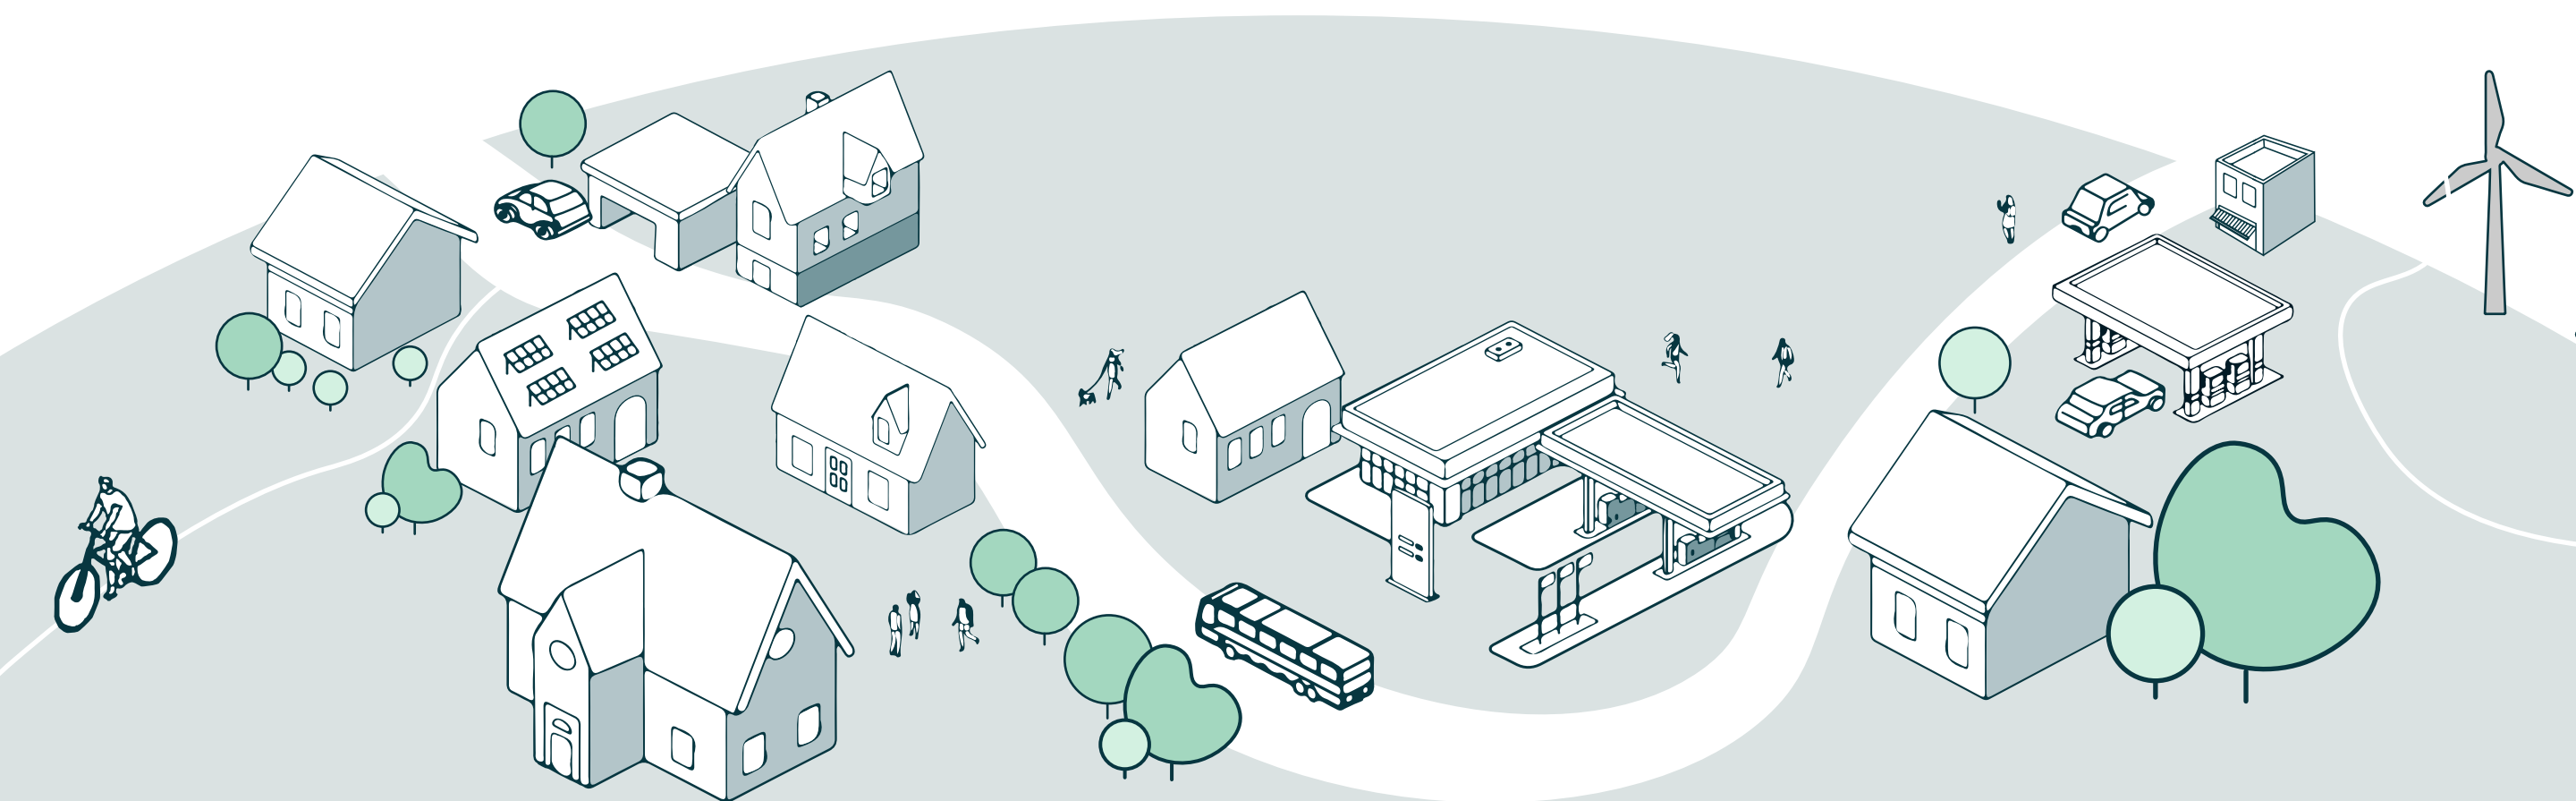

REGENeration of neighbourhoods towards a low-carbon,
inclusive and affordable built environment

ARCHITECTURAL FIRM

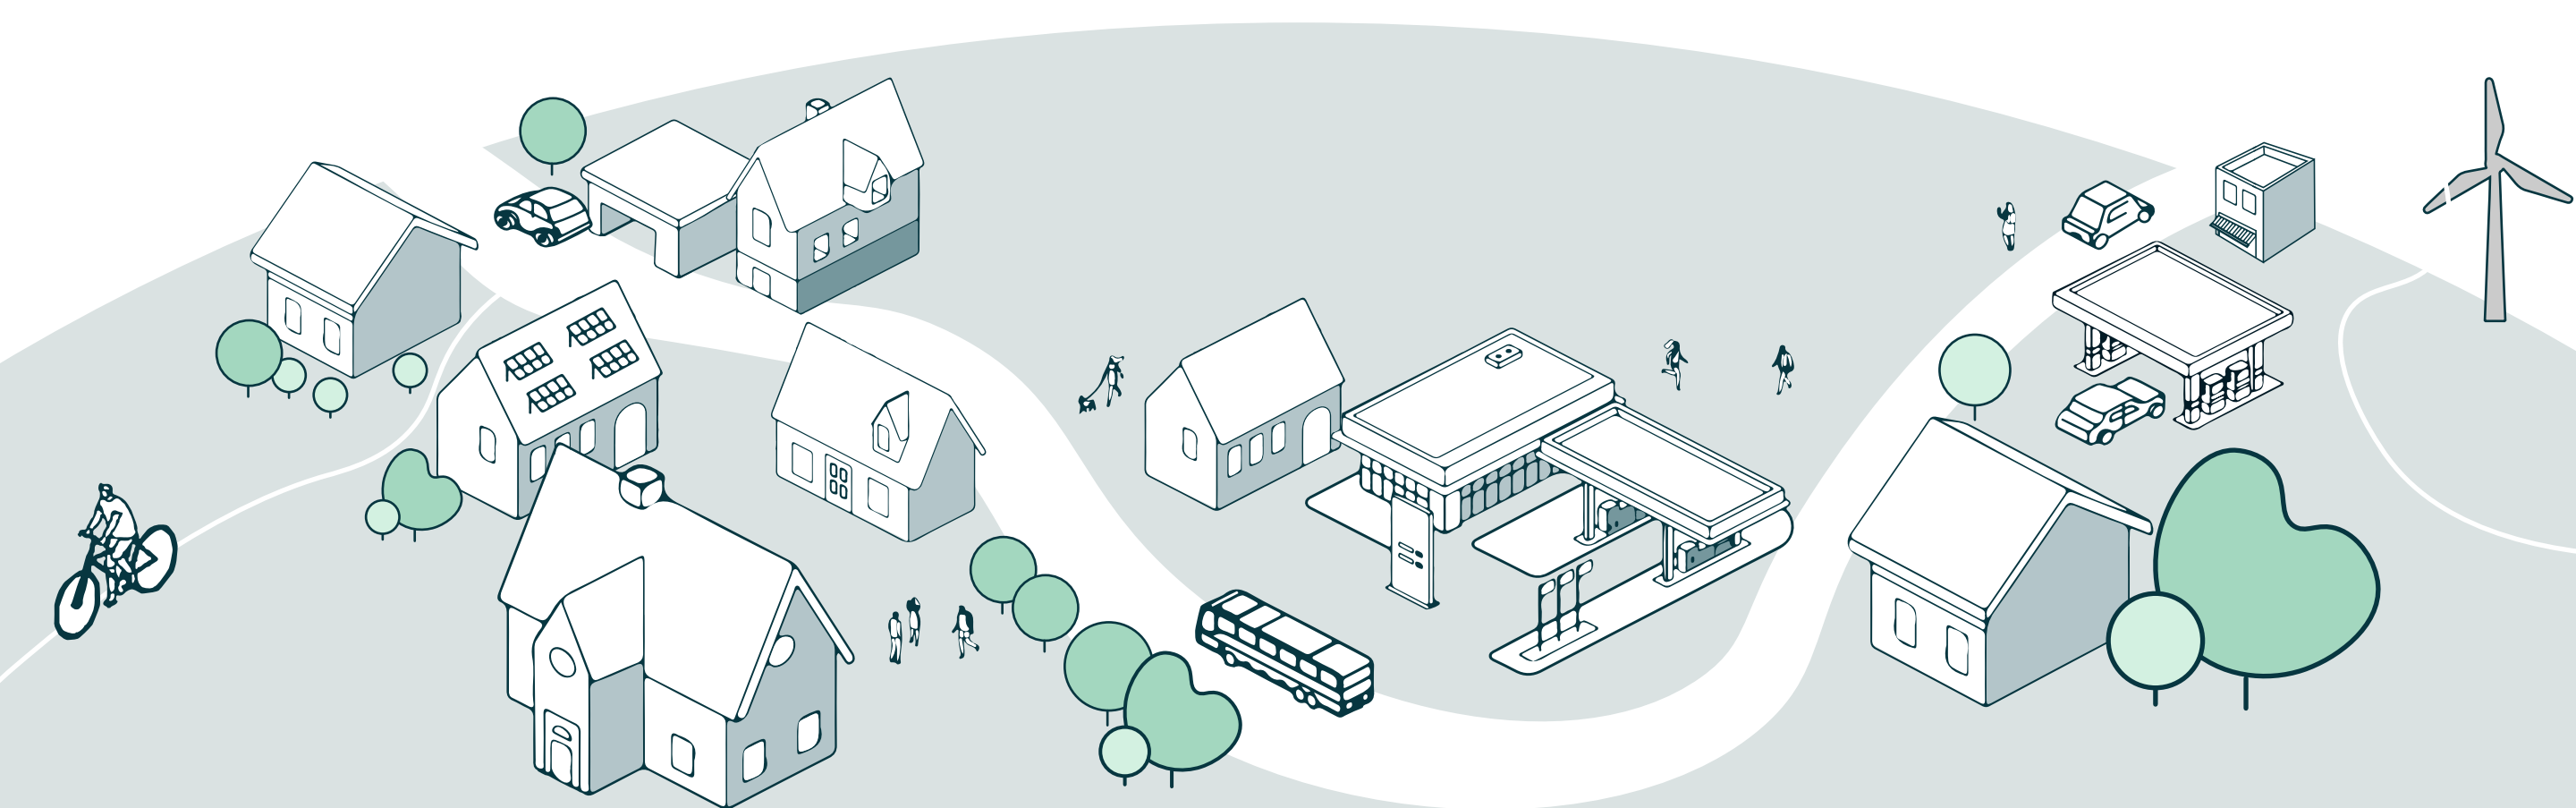

Can you introduce your organization?

Vervoort Architecten is an architectural firm based in the city of Eindhoven, The Netherlands, run by Anneke and Eva Vervoort, specialized in refurbishment and retrofitting of existing real estate. Vervoort Architecten takes the role of the architect as a total integrator and uses appropriate, appealing architecture to showcase smart design in all its aspects, for both large and small projects, catering to private and professional clients. Vervoort Architecten is experienced in combining innovative research with practice, with core expertise in sustainability, refurbishment, prefabrication, and conceptual design.

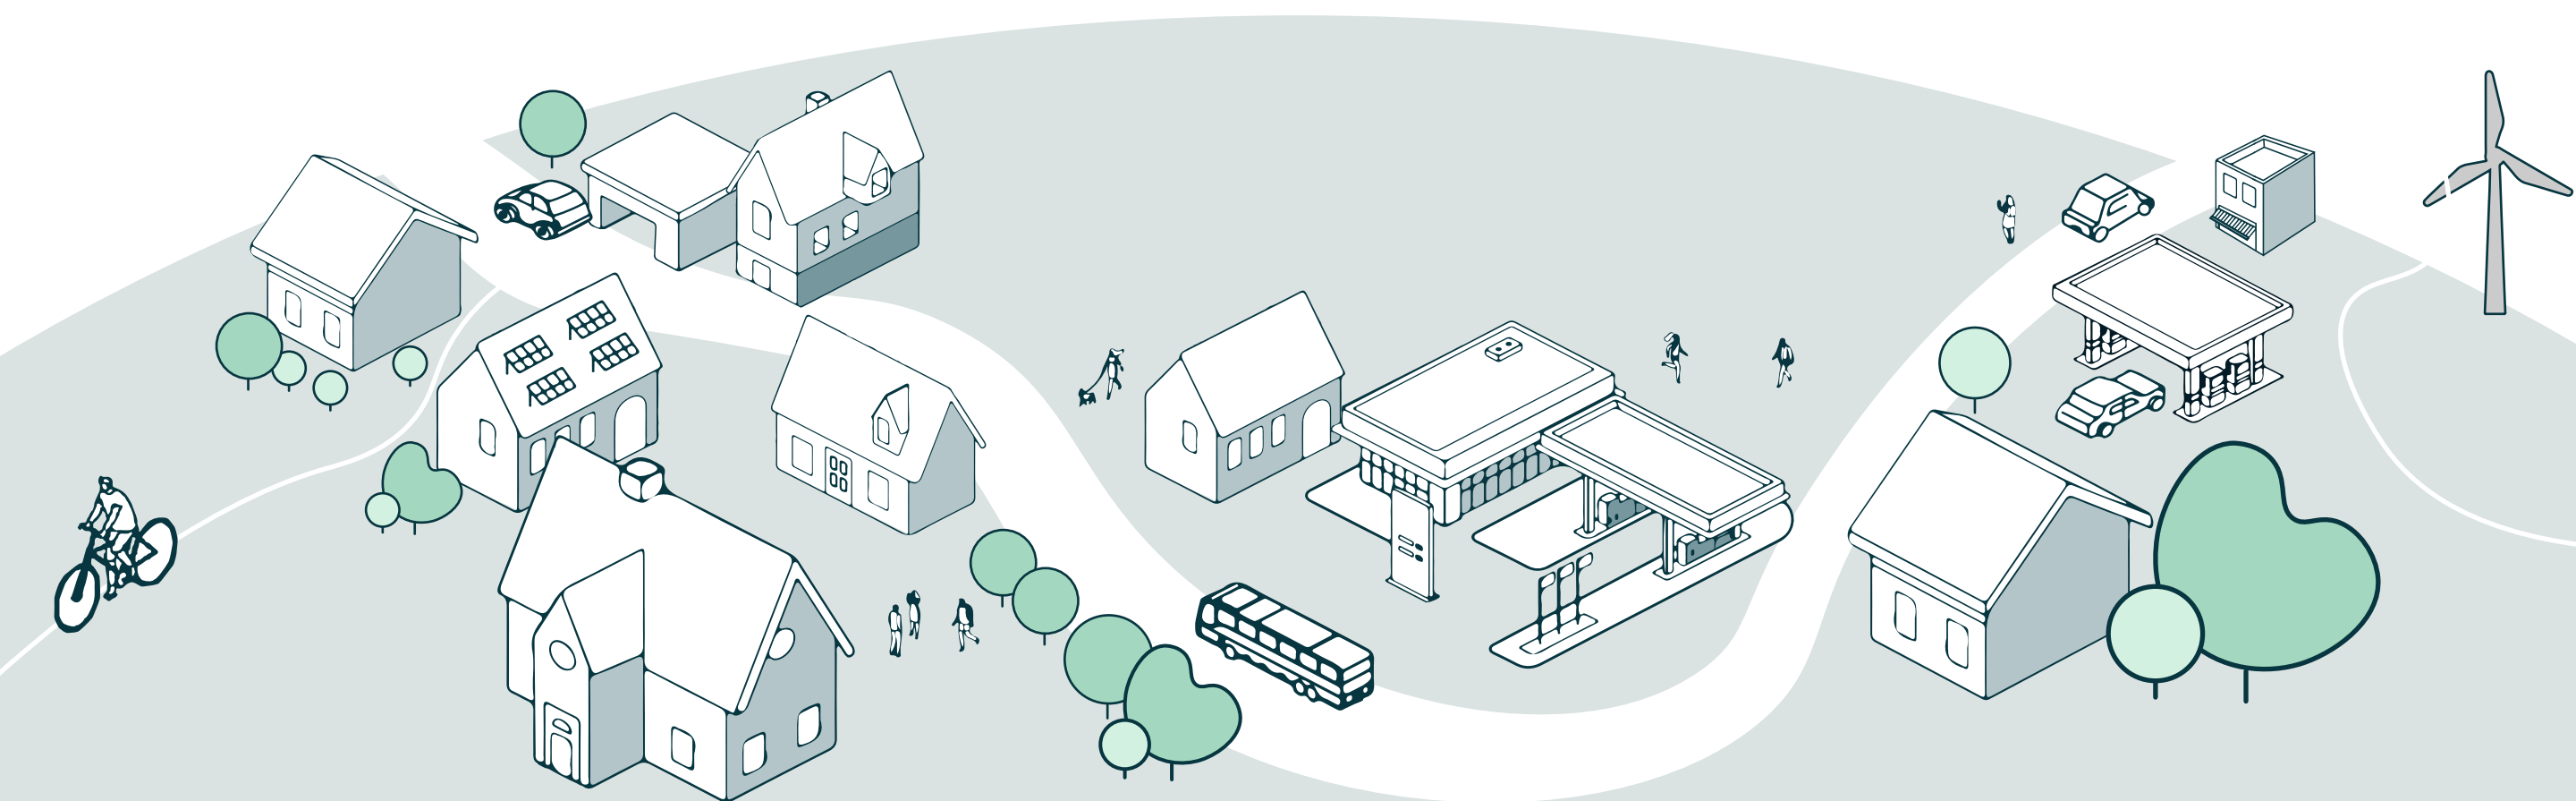

How does your organization's expertise contribute to the REGEN project's goals of paving the way toward sustainable and lasting people-centric neighbourhood regeneration through the development of an Assessment Framework for Urban Regeneration (AFUR)?

Vervoort Architecten can provide a practical approach to the development of the AFUR methodology. We can identify the dos and don'ts that play a role in the future application of the methodology in a Dutch context and, in addition, help create a generic methodology that is customizable and applicable to a wide range of locations.

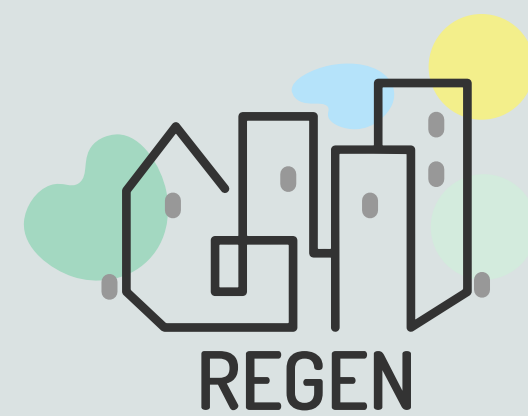

How do you see your organization's participation in neighbourhood regeneration offices (NRO) and the REGEN toolbox development?

Regarding the NROs, we are closely following their development and, building on KAW's existing expertise in this area, aim to support their evolution into an effective social tool for on-site, neighborhood-oriented regeneration. Similarly, in the development of the REGEN toolbox, we are particularly interested in the synthesis, collaboration, and complementarity between the different tools, and in how they can contribute to a unified AFUR methodology.
